Claim Rejections – 35 USC 102

- 3 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

- 4 Claim 1-6 is rejected under 35 U.S.C. 102b as being anticipated by Ishii et al. (US 5,958,821).

- 5 Ishii et al. teaches the method of oxidation of an aromatic compound having an alkyl substituent (see abstract; column 8, lines 57-58), by oxidizing it with oxygen into an

aldehyde (column 9, lines 21-23) in the presence of Ag or Au (column 13, line 5), supported on a carrier (column 16, lines 18-21). The group VIII (group 8) elements (column 13, line 2) can also be further supported on the catalyst (column 16, lines 18-21). Ishii et al. further teaches the oxidation to produce an aromatic carboxylic ester (see abstract; column 9, lines 30-36), by the addition of a primary alcohol e.g. methanol, ethanol (column 29, line 2). Therefore these claims are fully met.

Claim Rejections – 35 USC 103

6 The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishii et al. (US 5,958,821).

7 Ishii et al. teaches the method of oxidation of an aromatic compound having an alkyl substituent (see abstract; column 8, lines 57-58), by oxidizing it with oxygen into an aldehyde (column 9, lines 21-23) in the presence of Ag or Au (column 13, line 5), supported on a carrier (column 16, lines 18-21). The group VIII (group 8) elements (column 13, line 2) can also be further supported on the catalyst (column 16, lines 18-21). Ishii et al. further teaches the oxidation to produce an aromatic carboxylic ester

(see abstract; column 9, lines 30-36), by the addition of a primary alcohol e.g. methanol, ethanol (column 29, line 2).

8 Though Ishii et al. does not exemplify the oxidation of an aromatic aldehyde to aromatic carboxylic ester, the art suggests that oxidizing an aromatic aldehyde, using a primary alcohol as the solvent would give the corresponding aromatic carboxylic ester (column 29, lines 1-26). Furthermore, oxidation of aldehydes to carboxylic esters is old in the art.

9 Therefore, it would be *prima facie* obvious to one of ordinary skill in the art at the time of the invention, to further oxidize the aromatic aldehyde to the carboxylic ester using a primary alcohol. The expected result would be the efficient formation of both an aromatic aldehyde and an aromatic carboxylic ester in good yield.
